

AIRCARE-PR

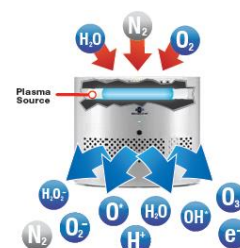

We spend about 90% of our time indoors. Whether in the office, at home, on outings, our activities lead us to spend most of our time indoors. However, indoor pollution is greater than outdoor pollution due to the presence of fine particles, bacteria, viruses or pathogenic germs. Numerous studies have confirmed the importance of good indoor air quality for the health and productivity of employees and occupants.

PR is designed specifically for small degree of pollution, the appropriate area office and home environments, indoor air pollution can effectively solve the following problem:

- **Volatile organic compounds (VOC):** building decoration materials and furniture pollution (including formaldehyde and benzene, etc.), chemicals volatile matter (such as pesticides, chemical cleaning agents), cigarette combustion products and all kinds of garbage The volatile components;
- **Microorganisms:** the air and surfaces of bacteria, viruses, fungi and the like;
- **Odour:** food odours, smoke, pet odours...

PR offers 24 hours of continuous operation, the purification process does not use chemicals, no noise, no secondary pollution, in the office and home environment. Not only that, it is a unique and elegant appearance with the perfect blend of interior furnishings and decorative environment

Advantages :

- They are easy to use (a simple plug is enough!).
- Vehicle disinfection in a few minutes,
- They require minimal annual maintenance (lamp change).
- Mobile and versatile, the devices can be used in the following areas
- No chemicals. Perfectly natural

Classrooms, creches, offices, waiting room, reception hall, sanitary facilities, sports halls
